

Pb + Pb $\rightarrow$ D⁰ + X (An0n, $\sqrt{s} = 5.36$ TeV)

HymnD band. Combines in quadrature: factorization-scale variation ($Q = 0.5\text{--}2 \times m_T$, $m_T^2 = m_c^2 + k_{D\perp}^2$), fit (replica) uncertainty from the 100 HymnD fit replicas, and BK initial-condition uncertainty from a 100-sample dipole-amplitude posterior.

BCFY/KnieslKramer bands. BK initial-condition uncertainty (100-sample dipole-amplitude posterior) only, these schemes have no scale/replica study.
